I. INTRODUCTION

A RISK FACTORS:

Apart from the risk factors mentioned in SAI, following are some of the additional risk factors which investors are advised to go through before investing:

a) STANDARD RISK FACTORS:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- Mutual Funds and securities investments are subject to market risks and there is no assurance or guarantee that the objectives of the Scheme will be achieved.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on various factors and forces affecting the capital markets. The value of investments may be affected, inter-alia, by changes in the market, interest rates, changes in credit rating, trading volumes, settlement periods and transfer procedures; the NAV is also exposed to Price/Interest-Rate Risk and Credit Risk and may be affected inter-alia, by government policy, volatility and liquidity in the money markets and pressure on the exchange rate of the rupee.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- BHARAT Bond ETF - April 2023 is the name of the Scheme & does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of ₹ 1,00,000 made by it towards setting up the Fund.
- The Scheme is not a guaranteed or assured return Scheme.

b) SCHEME SPECIFIC RISK FACTORS:

The performance of the Scheme may be affected by changes in Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems, etc. Some of the Risks are listed below:

1. Risks Associated with Fixed Income and Money Market Instruments:

- **Interest rate risk:** Price of a fixed income instrument falls when the interest rates move up and vice-versa, which will affect the NAV accordingly.
- **Spread risk:** Investments in corporate bonds are exposed to the risk of widening of the spread between corporate bonds and gilts. Prices of corporate bonds tend to fall if this spread widens which will affect the NAV of the Scheme accordingly.
- **Credit risk or default risk:** Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest &/or principal payment obligations.
- **Liquidity:** The Risk of non execution of sale/purchase order due to low volumes is liquidity risk.
- **Reinvestment risk:** Interest rates may vary from time to time. The rate at which intermediate cash flows are reinvested may differ from the original interest rates on the security, which can affect the total earnings from the security.

- **Performance Risk:** Performance of the Scheme may be impacted with changes in factors, which affect the capital market and in particular the debt market.
- **Market risk:** Lower rated or unrated securities are more likely to react to developments affecting the market as they tend to be more sensitive to changes in economic conditions than higher rated securities.

2. Risk Factors associated with Exchange Traded Fund investing in Bonds :

i. Lack of Vibrant Secondary Market for Units of the Scheme:

Although the Units of the Scheme will be listed on the Stock Exchanges such as NSE & BSE, there can be no assurance that a vibrant secondary market for units of the Scheme will be developed or maintained by the Authorised Participants.

ii. Halting of Trading in Units of the Scheme:

Trading in the Units of the Scheme on NSE/BSE may be halted because of market conditions or for reasons that in view of NSE/BSE, SEBI or any other Regulatory authorities. Thus, active trading in the units of the Scheme is not advisable.

In addition, trading of the Units of the Scheme are subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange and SEBI 'circuit filter' rules.

There can be no assurance that the requirements of NSE/BSE necessary to maintain the listing of the Units of the Scheme will continue to be met or will remain unchanged.

iii. Lack of secondary market depth:

In case of unit creation and unit redemption, the Scheme will have to either buy a basket of securities or sell a basket of securities in proportion of the underlying index. This requires an active secondary market for underlying securities at all points of time. A lack of depth in secondary market for underlying securities could hamper the efficient transaction in unit creation and unit redemption.

iv. Units of the scheme may trade at prices other than NAV:

Depending on the demand-supply dynamic, the units of the Scheme may either trade on the Stock Exchange above or below the NAV of the Scheme. This may give rise to arbitrage opportunities. However, the in-built mechanisms of unit creation and unit redemption in the form of Cash or in-kind is designed to reduce the arbitrage opportunity for market participants.

v. Regulatory Risk:

Any changes in Regulations by SEBI / RBI / Stock Exchange / GOI / and other decision makers may hamper the ability of the market participants in trading resulting into wider premium/discount to NAV.

vi. Asset Class Risk:

The returns from the types of Securities in which the Scheme invests may under-perform returns of general Securities markets or different asset classes. Different types of securities tend to go through cycles of out-performance and under-performance in comparison of Securities markets.

vii. Redemption Risk:

Investors should note that even though the Scheme is an

open-ended Scheme, subscription/redemptions of Units of the Scheme directly with the Fund would be limited to such investors who have the ability to subscribe/redeem the units of the Scheme in specific Creation Size. Generally, these lot sizes are larger as compared to normal funds. Thus, even though this Scheme is open ended, due to large lot size, very few investors can directly subscribe and redeem the units of the Scheme. However, investors wishing to subscribe/redeem units in other than specific lot sizes can do so by buying/selling the same on NSE/BSE.

The AMC will endeavor to pay the redemption proceeds in Cash. However depending on the market volatility, liquidity conditions, applicable regulatory provisions, investor request etc., the AMC may redeem the Units and make the payout either “in-kind” i.e. through slice of the entire bond Portfolio or in combination of both i.e. Cash and “in-kind”.

viii. Risk of Investment Strategy

As the Scheme would be primarily investing in the Bonds of CPSE or any other eligible entities, any government policy which will have an impact on central public sector enterprises, including any change in the disinvestment policy of the government, could impact the price of the underlying assets. This may have negative impact on the performance of the Scheme.

ix. Risk of Credit Rating changes

It is understood that most of the CPSE securities have higher credit rating essentially due to government ownership and implied government support. Any potential change in government control, shareholding pattern, market perception, corporate action etc., could result in potential downgrade of credit rating of the Issuers. This may have negative impact on the performance of the Scheme.

x. Risk of Investment in eligible securities

The Scheme’s objective is to invest in eligible CPSEs securities as defined in the Index. The Scheme will invest in the securities predominantly through private placement route. These securities are generally auctioned on Electronic Bidding Platforms (EBP) in anonymous manner through competitive bidding. It is quite possible that the Scheme may not be able to subscribe to these securities in sufficient quantities. This may result in sub-optimal asset allocation until the next bidding takes place.

xi. Risk of variation in asset allocation as compared to the Index

The Scheme intends to accept “in-kind” unit creation request from investors. The criteria for securities eligible for “in-kind” subscription has been defined in this document. It is possible that the “in-kind” subscription may result in variation in asset allocation as compared to the Index asset allocation. However, the rebalancing provisions of the SEBI Regulations will be applicable.

xii. Risk of sovereign rating change

The valuation of the eligible CPSE securities is based on the shape of the sovereign bond yield curve. The level of sovereign bonds are, apart from other factors, dependent on the sovereign rating of India by global Credit Rating Agencies. Any potential change in India’s sovereign credit rating may have direct impact

on the levels of sovereign bonds which in turn may have impact on the eligible CPSE securities.

xiii. Risk of higher supply of CPSEs securities

There has been an increase in total issuances of CPSE securities in last 3 years. This has resulted in “crowding out effect” in the corporate bond market. As a result, credit spreads of certain CPSE issuers with higher supply have widened as compare to other CPSE issuers. This has also resulted in higher concentration for certain CPSE issuers resulting in lack of appetite. Any incremental issuance from these CPSEs is likely to be met with lukewarm response from the investors, resulting in further widening of credit spreads.

xiv. Lack of supply of eligible securities with desired maturity

The target maturity bond ETF structure has a pre-defined maturity date. This necessitate investment in eligible securities maturing within 3 months before the maturity date of the Scheme. Any decline in potential supply of eligible securities maturing within 3 months before the maturity date of the Scheme may expose the Scheme to the reinvestment risk or investing in lower yielding TREPS in the maturing year of the Scheme. This may be detrimental to the investor interest.

xv. Increase in supply of Tax-free bonds from CPSEs Issuers

The target maturity bond ETF structure is designed to provide investor with long-term fixed income asset allocation to high qualities CPSEs with better tax-adjusted returns in the current interest rate environment. Any potential increase in supply of Tax-free bonds from CPSEs issuer may adversely impact the demand and future growth of the Scheme.

xvi. Risk of divergence in credit rating of the Scheme and the Index

The Scheme intends to invest in AAA rated eligible CPSEs entities. Any potential credit rating downgrade will necessitate the Scheme to sell bonds of downgraded CPSEs entities at market level and invest in new AAA rated eligible CPSEs entities. This exercise is dependent on the secondary market liquidity in affected CPSEs entities. In case if the Scheme is unable to liquidate these bonds in the open market, this will result in divergence in the credit rating composition between the Scheme and the Index.

3. Risks associated with investing in Tri Party Repo through CCIL (TREPS):

Risk of exposure in the Triparty Repo settlement Segment provided by CCIL emanates mainly on two counts -

- a. Risk of failure by a lender to meet its obligations to make funds available or by a borrower to accept funds by providing adequate security at the settlement of the original trade of lending and borrowing under Triparty Repo transaction.
- b. Risk of default by a borrower in repayment.

4. Risks associated with stock lending

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved

intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. It may be noted that this activity would have the inherent probability of collateral value drastically falling in times of strong downward market trends, rendering the value of collateral inadequate until such time as that diminution in value is replenished by additional security. It is also possible that the borrowing party and/or the approved intermediary may suddenly suffer severe business setback and become unable to honor its commitments. This, along with a simultaneous fall in value of collateral would render potential loss to the Scheme. Besides, there can be temporary illiquidity of the securities that are lent out and the scheme will not be able to sell such

lent out securities until they are returned. There is also a possibility of opportunity loss.

5. Risks Associated With Segregated Portfolio

- 1) Unit holder holding units of Segregated Portfolio may not be able to liquidate their holdings till the recovery of money from the issuer.
- 2) Portfolio comprising of Segregated Portfolio may not realise any value or may have to be written down.
- 3) Listing of units of Segregated Portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

B INVESTMENT OBJECTIVE

The investment objective of the Scheme is to replicate Nifty BHARAT Bond Index - April 2023 by investing in bonds of CPSEs/CPSUs/CPFIs and other Government organizations, subject to tracking errors.

However, there is no assurance that the investment objective of the Scheme will be realized and the Scheme does not assure or guarantee any returns.

C ASSET ALLOCATION AND INVESTMENT PATTERN

Under normal circumstances, the asset allocation of the Scheme would be as follows:

Asset Class	Indicative Allocation (% to net assets)	Risk Profile
#Securities issued by eligible CPSEs/CPSUs/CPFIs and other Government organizations which are either part of or eligible to be part of Nifty BHARAT Bond Index -April 2023	95% to 100%	Low to Medium
Government Securities maturing on or before maturity date of the Scheme, TREPS and REPO in government bonds	0% to 5%	Low

#Pursuant to SEBI Circular no. SEBI/HO/IMD/DF3/CIR/P/2019/147 dated November 29, 2019, replication of the Index by the Scheme shall be as follows:

- The Scheme shall replicate the index completely.
- In the event, if the condition laid down in para (a) above is not feasible due to non-availability of issuances of the issuer forming part of the index, the Scheme may invest in other issuances issued by the same issuer having deviation of +/- 10% from the weighted average duration of issuances forming part of the index, subject to single issuer limit of 15%. Further, at aggregate portfolio level, the duration of the Scheme shall not deviate +/- 5% from the duration of the index.
- In the event, if the conditions laid down in para (a) and para (b) above are not feasible, the Scheme shall invest in issuances of other issuer(s) within the index having duration, yield and credit rating in line with that of the non-available issuances of the issuer(s) forming part of the index, subject to single issuer limit of 15%. The duration of the Scheme shall not deviate +/- 5% from the duration of the index.
- In the event, if the conditions laid down in para (a), para (b) and para (c) above are not feasible, the Scheme shall invest in issuances of issuer(s) not forming part of the index with duration, yield and credit rating in line with that of the non-available issuances of issuer(s) forming part of the index. Such investment in issuances of issuer(s) not forming part of the index shall be maximum of 20% of the aggregate portfolio of the Scheme.

- The rationale for any deviation from para (a) above shall be recorded.
- In an event where the credit rating of an issuance falls below the investment grade or rating mandated in the index methodology, rebalancing by the Scheme shall be done within a period of 5 working days.

It may be noted that after the closure of the NFO Period/pending deployment of the funds of the Scheme, the Scheme may park the funds in Government Securities maturing on or before the maturity date of the Scheme, TREPS and/or REPO in government bonds until the full deployment in securities issued by eligible issuers is achieved.

The Scheme may engage in Stock Lending in accordance with SEBI guidelines in this regard. Not more than 20% of the net assets of the Scheme would generally be deployed in stock lending and not more than 5% of the net assets of the Scheme will be deployed in Stock Lending to any single counterparty.

The cumulative gross exposure through all the debt securities should not exceed 100% of the net assets of the scheme. However, cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.

The AMC would monitor the tracking error of the Scheme on periodic basis and would seek to minimize tracking error to the maximum extent possible. Under normal circumstances, the AMC will endeavour that the tracking error of the Scheme does not exceed 2% per annum.

The Scheme does not intend to undertake/ invest/ engage in:

- Derivatives;
- Repos in corporate debt securities;
- Short selling of securities;
- Unrated instruments (except TREPS/ Government Securities/ Repo in Government Securities);
- Foreign securities/ADR/GDR;
- Securitised debts;
- Fund of Fund Schemes; and
- Credit Default Swaps.

- In case of the process of rebalancing of the portfolio in the following events :
 - Event of credit rating changes,

In case of deviation in the asset allocation beyond 7 Business days, the justification for the same shall be provided by the Fund Manager of the Scheme to the Investment Committee and the reason for the same shall be recorded in writing. The Investment Committee shall then decide on the course of action.

Provided further and subject to the above, any change in the asset allocation affecting the investment profile of the Scheme shall be

effected only in accordance with the provisions of sub regulation (15A) of Regulation 18 of the Regulations, as detailed later in this document.

 - f) No redemption and subscription will be allowed in the Segregated Portfolio.

However, upon recovery of money from Segregated Portfolio, whether partial or full, it will be immediately distributed to the unit holders in proportion to their holding in the Segregated Portfolio;
- 3) If the Trustees do not approve the proposal to segregate portfolio, the AMC will issue a press release immediately informing investors of the same. In that case, subscription and redemption applications will be processed based on the NAV of Total Portfolio.

Valuation:

The valuation would take into account the credit event and the portfolio shall be valued based on the principles of fair valuation (i.e. realizable value of the assets) in terms of the relevant provisions of SEBI (Mutual Funds) Regulations, 1996 and Circular(s) issued thereunder.

Disclosure Requirement:

- a. Any recovery of amount of the security in the segregated portfolio even after the write off shall be distributed to the investors of the segregated portfolio.

 - iv. The trustees shall monitor the compliance of this circular and disclose in the half-yearly trustee reports filed with SEBI, the compliance in respect of every segregated portfolio created.
- b. In order to avoid mis-use of segregated portfolio during the credit event trustees have put mechanism in place to negatively impact the performance incentives of Fund Managers, Chief Investment Officers (CIOs), etc. involved in the investment process of securities under the segregated portfolio, mirroring the existing mechanism for performance incentives of the AMC, including claw back of such amount to the segregated portfolio of the scheme.

D WHERE WILL THE SCHEME INVEST?

The Scheme shall invest in Bonds and money market instruments of the eligible CPSE issuers as stated under the section 'Asset Allocation and Investment Pattern' with residual maturity in lines with but not exceeding the Maturity Date of the Scheme subject to availability and suitability. .

In order to maintain minimum liquidity buffer to take care of the unanticipated redemption, the Scheme may invest a portion of its portfolio in Government Securities maturing on or before maturity date of the Scheme, TREPS and REPO in government bonds as indicated in asset allocation table.

The investment restrictions and limits as specified in the SID under heading 'Investment Restrictions', shall be applicable.

E INVESTMENT STRATEGY & APPROACH

- The Scheme seeks to track investment results of Nifty BHARAT Bond Index -April 2023 subject to tracking errors. Accordingly, the Scheme will invest in AAA rated bonds issued by eligible CPSEs/ CPSUs/CPFIs and other Government organizations maturing not beyond the maturity date of the Scheme. The Scheme is a Target Maturity Date bond ETF. It will mature on April 17, 2023 and will distribute all of its maturity proceeds (Net Assets) to the Unitholders.
- The Scheme will follow Buy & Hold investment strategy in which existing bonds will be held till maturity unless sold for meeting redemptions or rebalancing requirement.
- The portfolio of eligible securities invested by the Scheme is expected to have, in aggregate, fundamental characteristics such as modified duration, weighted average maturity, aggregate credit ratings, aggregate Yield To Maturity (YTM) etc. along with other liquidity parameters predominantly in line with Nifty BHARAT Bond Index - April 2023. The Scheme may or may not hold all of the eligible securities which are part of Nifty BHARAT Bond Index - April 2023. The Issuer weight of the Scheme will be broadly in line with the Issuer weights in the Index subject to suitability and availability of the eligible CPSEs bonds from time to time.

- The Scheme may also participate in new issuances by the eligible issuers which are currently not part of the index, but will eventually get included in the index during the next rebalancing period in line with SEBI circular no. SEBI/HO/IMD/DF3/CIR/P/2019/147 dated November 29, 2019. The Scheme may participate in such issuances only if they meet all eligibility criteria as defined by the index and suitable from asset allocation perspective and other parameters of the Scheme.
- The Scheme may also invest a portion of its portfolio in Government securities maturing on or before the maturity date of the Scheme, Repo in government securities and TREPS to manage liquidity requirement.

Risk Mitigation Measures:

The Scheme will predominantly invest in securities of eligible CPSEs/CPSUs/CPFIs and other Government organizations which are constituents of the underlying Index viz. Nifty BHARAT Bond Index - April 2023. Based on the availability of issuances, it is expected that the Portfolio allocation could be different than that of underlying index allocation and could result in Tracking Error. That said, broad risk parameters of the portfolio of the Scheme such as credit rating, weighted average YTM, weighted average maturity, asset allocation etc. are expected to be similar to the Underlying Index.

The Scheme may also invest a portion of its portfolio in Government securities maturing on or before the maturity date of the Scheme, Repo in government securities and TREPS to manage liquidity requirement.

This allocation will be monitored periodically and it shall be ensured that investments are made in accordance with the Scheme objective and within the regulatory and internal investment restrictions prescribed from time to time.

Since disciplined investing requires risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process.

The Scheme has a detailed process to identify, measure, monitor and manage various portfolio risks. The objective is to understand these risk and mitigate them wherever possible.

Few of the key risk identified are:

Risk & Description specific to the Scheme	Risk mitigants / Management Strategy
Market/Volatility Risk Risk arising due to price fluctuations and volatility, having material impact on the overall returns of the Scheme.	The Scheme, being a Target Maturity Date ETF structure, is expected to follow a Buy and Hold investment strategy in a passive manner. Based on that, we expect to mitigate intermittent price volatility in the underlying assets. Investors who remain invested until the maturity of the Scheme are expected to mitigate market / volatility risk to large extent.
Credit risk Risk associated with repayment of investment	The Scheme intends to invest predominantly in AAA rated bonds issued by eligible CPSEs/CPSUs/CPFIs and other Government organizations. These CPSEs/CPSUs/CPFIs and other Government organizations are largely owned by the Government of India. As a result the bond issued by them are considered as relatively safe.

Risk & Description specific to the Scheme	Risk mitigants / Management Strategy
Liquidity risk Risk arising due to inefficient Asset Liability Management, resulting in high impact costs	The Scheme intends to invest predominantly in AAA rated bonds issued by eligible CPSEs/CPSUs/CPFIs and other Government organizations. In general, bonds issued by CPSEs entities enjoy higher level of secondary market liquidity.
Interest rate risk Price volatility due to movement in interest rates	The Scheme, being a Target Maturity Date ETF structure, is expected to follow a Buy and Hold investment strategy in a passive manner. All investments are in line with the maturity date of the Scheme and the underlying Index. This should help mitigate the interest rate risk.
Event risk Price risk due to company or sector specific event	The Scheme intends to invest in AAA rated bonds of eligible CPSEs/CPSUs/CPFIs and other Government organizations. These bonds are perceived to be relatively safe with quasi sovereign risk due their government ownership.

Portfolio Turnover:

The Scheme is a Target Maturity Date Exchange Traded Fund. It is expected to be managed in a passive manner. However, there may be request of subscriptions and redemption from Authorised Participants and Large Investors on periodic basis, which may necessitate transaction in underlying basket of eligible securities. In general, the portfolio turnover of the Scheme will depend upon the extent of request of unit creation and unit redemption received from Authorised Participants and Large investors, requirement to rebalance the portfolio on account of change in the credit rating, corporate event etc. It may be noted that in the last year of maturity of the Scheme, the Portfolio Turnover may increase on account of re-deployment of maturity proceeds realized from initial investment.

Tracking Error:

Tracking Error is divergence of the performance (return) of the Fund's portfolio from that of the Underlying Index. Based on that the availability of issuances by the CPSEs/CPSUs/CPFIs and other Government organizations, it is expected that the Portfolio allocation could be different than that of underlying index allocation and could result in Tracking Error. That said, the risk parameters of the portfolio of the Scheme and underlying index could be similar.

The Fund will endeavor to keep the tracking error as low as possible. Under normal circumstances, such tracking error is not expected to exceed 2% per annum.

Tracking error could be the result of a variety of factors including but not limited to:

- Delay in the purchase or non- availability of eligible CPSEs securities which are part of the Index
- Delay in liquidation of CPSEs bonds which have been removed by the Index
- Due to partial investment in Government securities, Repo in Government securities and TREPS

- Due to investment in eligible CPSEs issuer which are yet to be part of the Index
- Due to mismatch in the weight of the Index and the Scheme throughout life of the Scheme.
- Change in asset allocation between the Index and the Scheme in the last year of the Scheme.

Index Rebalancing/Reconstitution

- Index will be reviewed at the end of each calendar quarter with data cut-off date being 15 working days (T-15) before last working day of calendar quarter (T) . Similarly, new issuances during previous calendar quarter shall be included in the index if they meet the eligibility and selection criteria.
- In case any of the index constituent undergoes a scheme of arrangement for corporate events such as merger, spin-off, compulsory delisting or suspension etc., additional index reconstitution may be undertaken. The equity shareholders’ approval to a scheme of arrangement is considered as a trigger to reset the combined issuer weight to single issuer limit on the next rebalance date.
- Based on the governments ‘in principle approval’ to disinvest its stake in some of the government owned entities mentioned in Annexure- 6, such entities were not included to be part of the index at launch/inception of the index. On account of disinvestment in an existing constituent, such issuer shall be excluded from the index effective next rebalancing/reconstitution only if the disinvestment process has been completed.
- In case an eligible issuer gets downgraded post the data cut-off date but before the portfolio disclosure date (t-3), such issuer shall be excluded from being a part of the index.

P. INDIAN DEBT MARKETS - PILLARS OF THE INDIAN ECONOMY

India's bond market has witnessed a rapid growth in the last five years. Its total market capitalization was ₹ 128 trillion (\$1.79 trillion) as on October 2019 according to NSE data.

India's bond market comprises mainly of sovereign bonds, corporate bonds and money market assets. Sovereign bonds comprised 71% of the market capitalization; corporate bonds were 24% while money market assets comprised 5% of the market capitalization.

Sovereign bonds are issued by the Government of India & Indian States to finance their budget deficits. The budget deficit is generally announced in the Union Budget for the next financial year. It is widely followed by the market participants for their analysis on the government finances. It forms the basis for India's monetary policy and demand-supply dynamic in the secondary market.

The Government of India typically funds a significant portion of its budget deficit by auctioning government bonds on weekly basis. The auction calendar is made public in advance. For last few years, the government has made conscious efforts to auction bonds with residual maturity greater than ten years in order to lengthen its maturity profile. The government also auctions Treasury Bills on weekly basis to finance their short-term cash flow mismatches. The government's Treasury Bill auction calendar is also available for market participants in advance. The government auctions 91-day treasury bills on every Wednesday while 182-day & 364-day treasury bills are auctioned on alternate Wednesday. Indian states also borrow in the bond market by auctioning State Development Loans (SDL) on alternate Tuesdays. These bonds are mostly purchased by Banks, Insurance companies as well as other market participants due to their sovereign nature, superior secondary market liquidity and statutory holding requirements by the regulators.

Indian corporate entities as well as Public Financial Institutions

typically borrow wholesale money from the debt capital market. Primary supply of corporate bonds has been steadily increasing in the last three years in proportion to the increase in the demand for quality assets from mutual funds, insurance companies, foreign portfolio investors and pension funds.

As on October 29, 2019, size of the Indian government bond market is around 55 trillion, which is distributed amongst 88 unique issues. As compared to that India's corporate bond market is more fragmented. The total corporate bond market size is around ₹ 31 trillion, which is distributed amongst around 23,400 unique issues.

The average daily trading volume in the Indian Government Bond market is around ₹ 40,000 crore comprising 1.4% of the amount outstanding. As compared to that the average daily trading volume of bond issued by CPSEs is around 2,100 crore comprising 0.46% of the outstanding amount as per NSE.

In the last three years CPSEs has issued around ₹ 5 trillion worth of bonds amongst around 375 private placement issues.

INTRODUCTION TO EXCHANGE TRADED FUNDS

ETFs are innovative products that provide exposure to an index or a basket of securities that trade on the exchange like a single stock. ETFs have a number of advantages over traditional open-ended index funds as they can be bought and sold on the Exchange at prices that are usually close to the actual intra-day net asset value of the scheme. ETFs are an innovation to traditional mutual funds as ETFs provide investors a fund that closely tracks the performance of an index with the ability to buy / sell on an intra-day basis. Unlike listed close ended funds, which trade at substantial premiums or more frequently at discounts to net asset value, ETFs are structured in a manner which allows to subscription and redemption of units directly with the fund in creation size, thereby ensuring that ETFs trade close to their actual net asset values.

ETFs are usually passively managed funds wherein subscription / redemption of units work on the concept of exchange with underlying securities. In other words, large investors / Authorised Participants can also purchase units by depositing the underlying eligible securities with the mutual fund / asset management company and can redeem by receiving the underlying securities in exchange of units. Units can also be bought and sold directly on the exchange.

ETFs have all the benefits of indexing such as diversification, low cost and transparency. As ETFs are listed on the exchange, costs of distribution are much lower and the reach is wider. These savings in cost are passed on to the investors in the form of lower costs. Furthermore, exchange traded mechanism helps reduce minimal collection, disbursement and other processing charges.

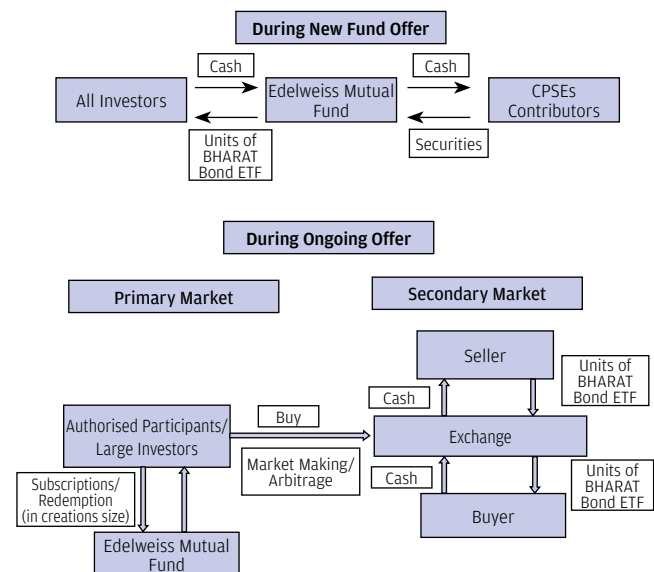

The structure of ETFs is such that it protects long-term investors from inflows and outflows of short-term Investor. This is because the mutual fund does not bear extra transaction cost when buying / selling due to frequent subscriptions and redemptions. Due to the creation / redemption of units through the in-kind mechanism the fund can keep lesser funds in cash.

Benefits of ETFs

- Can be easily bought / sold like any other stock on the exchange through terminals spread across the country.
- Can be bought / sold anytime during trading hours at prices that are expected to be close to actual net asset value of the scheme. Thus, investor invests at real-time prices as opposed to end of day prices.
- No separate form filling for buying / selling units. It is just a phone call to your broker or a click on the internet.
- Minimum investment for an ETF is one unit.
- Protects long-term investors from the inflows and outflows of short-term investors.
- Underlying Index Constituents available on the website every day.
- Live price of the units is quoted on the exchange following every trade allowing investor to know the fair value of the portfolio.
- Bond ETF provides easy access to the Bond Market at low cost.
- Passive Investment Strategy helps lower Operational expenses as compared to actively managed bond fund.
- Target Maturity: Since the maturity of this ETF is determined, the investor can get the money back along with return.
