Paragraph 12.16 of the Master Circular for Mutual Funds dated June 27, 2024.
13.	Repo / reverse repo in corporate debt securities.	The Scheme shall not invest in the said security	-
14.	Unrated debt instruments	The Scheme shall not invest in the said security	-

\*\*The Scheme may take an exposure to equity derivatives of constituents of the underlying index for short duration when securities of the index are unavailable, insufficient or for rebalancing at the time of change in

index or in case of corporate actions, as permitted subject to rebalancing within 7 calendar days (or as specified by SEBI from time to time). The exposure of the scheme in equity derivative instruments shall be up to 20% (for non-hedging) of the equity portfolio of the scheme.

Due to market conditions, the AMC may invest beyond the range set out in the asset allocation. Such deviations shall normally be for short term and defensive considerations as per Paragraph 1.14.1.2 of SEBI Master Circular dated June 27, 2024, and the fund manager will rebalance the portfolio within 7 calendar days from the date of deviation.

#### **Change In Investment Pattern:**

The Scheme, out of the funds allocated shall invest in securities covered by Nifty Bank index and shall invest in money market instruments, cash & cash equivalents and/or units of liquid schemes only to the extent necessary to meet the liquidity requirements for honoring repurchase / redemptions / expenses. In view of the nature of the Scheme, the asset allocation pattern as indicated above may not change, except in line with the changes made in SEBI (MF) Regulations, from time to time.

Subject to the above, any change in the asset allocation affecting the investment profile of the Scheme shall be affected only in accordance with the provisions of sub regulation (15A) of Regulation 18 of the Regulations, as detailed later in this document.

#### **Portfolio Rebalancing:**

In accordance with Clause 3.5.3.11 and 3.6.7 of the Master Circular for Mutual Funds dated June 27, 2024, in case of change in constituents of the index due to periodic review, the portfolio will be rebalanced within 7 calendar days. Any transactions undertaken in the scheme portfolio in order to meet the redemption and subscription obligations shall be done while ensuring that post 1.14. such transactions replication of the portfolio with the index is maintained at all points of time.

#### **B. WHERE WILL THE SCHEME INVEST?**

The Scheme shall invest in any of the following securities:

1. Equity and Equity related instruments.
2. Money Market Instruments.
3. Derivative Instruments.
4. Investments in the Schemes of AMC or in the schemes of any other mutual fund.

Please refer **Section II** of the document for further details for each instrument.

#### **C. WHAT ARE THE INVESTMENT STRATEGIES?**

The Scheme will track Nifty Bank Index and will use a “passive” or indexing approach to endeavor to achieve scheme’s investment objective. Unlike other funds, the scheme will not try to outperform its benchmark and will not seek temporary defensive positions when the market declines or appear overvalued. The AMC does not make any judgments about the investment merit of a particular stock or a particular industry segment nor will it attempt to apply any economic, financial or market analysis. Indexing eliminates active management risks with regard to over/ underperformance vis-à-vis a benchmark. Since the scheme is an exchange traded fund, the scheme will only invest in the securities constituting the underlying index.

In case of Money Market securities, the scheme aims to identify securities which offer optimal level of yields/returns, considering risk-reward ratio.

The scheme may take exposure to derivative instruments on underlying index (stock/ index futures) up to 20% of the Equity Net Assets. Derivatives shall mean derivatives instruments as permitted by SEBI, including derivative exposure in accordance with SEBI Master Circular dated June 27, 2024, and such other amendments issued by SEBI from time to time. The Scheme may take an exposure to equity derivatives of constituents of the underlying Basket when securities of the Basket are unavailable, insufficient or for rebalancing at the time of change in Basket or in case of corporate actions, for a short period of time, subject to derivative limits. Such exposure to derivatives will be rebalanced within seven calendar days. The Scheme may use derivative instruments such as stock/index futures and stock/index options contracts, swap agreements or any other derivative instruments that are permissible or may be permissible in future under applicable regulations and such investments shall be in accordance with the investment objective of the Scheme. Derivative limit subject to limit of 20% of equity net assets.

#### **PORTFOLIO TURNOVER**

The Scheme is an open-ended Exchange Traded Fund, and it is expected that there may be a number of subscriptions and repurchases on a daily basis through Stock Exchange(s) or Market Makers and Large Investors. Generally, turnover will depend upon the extent of purchase and redemption of units and the need to rebalance the portfolio on account of changes in the composition, if any. However, it will be the endeavor of the Fund Manager to maintain an optimal portfolio turnover rate commensurate with the investment objective of the Scheme and the purchase/ redemption transactions on an ongoing basis in the Scheme.

#### **TRACKING ERROR & TRACKING DIFFERENCE**

Tracking Error and Tracking difference is to measure divergence of the performance (return) of the Fund's portfolio from that of the Underlying Index. Tracking error / Tracking difference are inherent in any index fund and such errors may cause the schemes to generate returns which are not in line with the performance of the Nifty Bank TRI or one or more securities covered by / included in the Nifty Bank TRI. That said, the risk parameters of the portfolio of the Scheme and underlying index would be similar. Tracking Error / Tracking Difference may arise from a variety of factors including but not limited to:

1. Any delay in the purchase or sale of shares due to illiquidity in the market, settlement and realisation of sales proceeds, delay in credit of securities or in receipt and consequent reinvestment of dividends, etc.
2. The index reflects the prices of securities at a point in time, which is the price at close of business day on National Stock Exchange of India Limited (NSE). The scheme, however, may trade the securities at different points in time during the trading session and therefore the prices at which the scheme trades may not be identical to the closing price of each scrip on that day on the NSE.  
In addition, the scheme may opt to trade the same securities on different exchanges due to price or liquidity factors, which may also result in traded prices being at variance from NSE closing prices.
3. The potential of trades to fail may result in the scheme not having acquired the security at the price necessary to mirror the index.
4. Transaction and other expenses, such as but not limited to brokerage, custody, trustee and investment management fees.
5. Being an open-ended scheme, the scheme may hold appropriate levels of cash or cash equivalents to meet on going redemptions.
6. The scheme may not be able to acquire or sell the desired number of securities due to conditions prevailing in the securities market, such as, but not restricted to circuit filters in the securities, liquidity and volatility in security prices.
7. Due to the reasons mentioned above and other reasons that may arise, it is expected that the scheme may have a tracking error not to exceed by of 2% per annum from its Benchmarks.

8. However, it needs to be clearly understood that this is just an indicative range and that the actual tracking error can be higher or lower than the range given.

#### D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The performance of the scheme will be benchmarked against the Nifty Bank TRI.

The AMC/Trustee reserves the right to change the benchmark for evaluation of the performance of the Scheme from time to time, subject to SEBI Regulations and other prevailing guidelines if any.

#### Justification for use of benchmark:

The benchmark has been selected based on internal assessment because the scheme is a passively managed sectoral ETF scheme which will aim to track the performance of Nifty Bank – TRI and it would invest in securities which are constituents of the Nifty Bank - TRI.

### Part III- OTHER DETAILS

#### A. COMPUTATION OF NAV

The NAV shall be calculated in accordance with the following formula, or such other formula as may be prescribed by SEBI from time to time:

$$\text{NAV} = \frac{\text{Market or Fair Value of the Scheme's Investments+ Receivables+ Accrued Income+ Other Assets- Accrued Expenses- Payables- Other Liabilities}}{\text{Number of Units Outstandings}}$$

The NAV of the Scheme will be calculated and declared upto Four decimal places & the fourth decimal will be rounded off higher to the next digit if the fifth decimal is or more than 5 i.e., if the NAV is Rs. 10.45347 it will be rounded off to Rs. 10.4534.

Illustration of NAV:

If the net assets of the Scheme, after considering applicable expenses, are Rs.10,45,34,345.34 and units outstanding are 10,00,0000, then the NAV per unit will be computed as follows:  $10,45,34,345.34 / 10,00,000 =$  Rs. 10.4534 per unit (rounded off to four decimals).

The Mutual Fund will ensure that the repurchase price will not be lower than 95% of the Applicable NAV.

For other details such as policies w.r.t computation of NAV, rounding off, procedure in case of delay in disclosure of NAV etc. refer to SAI.

### I. Introduction

#### A. Definitions/interpretation

For detailed description please refer -

[https://www.edelweissmf.com/Files/SID%20/%20KIM%20/%20SAI%20related%20Disclosure/Published/Definition\\_05072024\\_102609\\_AM.pdf](https://www.edelweissmf.com/Files/SID%20/%20KIM%20/%20SAI%20related%20Disclosure/Published/Definition_05072024_102609_AM.pdf)

#### B. Risk factors

##### Scheme Specific Risk Factors

The performance of the Scheme may be affected by changes in Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems, etc. Some of the Risks are listed below:

##### 1. Risk Factors Associated with Equity & Equity related instruments

The value of the Scheme's investments may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, etc. Settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme.

- **Market Risk:** Changes in economic conditions, such as recessions or booms, can impact stock prices. Equities can experience significant price fluctuations and volatility in the short term due to market conditions, economic events, or investor sentiment. Broader events like financial crises or natural disasters can also affect equity markets
- **Company-Specific Risk:** Factors related to a company's operations, management decisions, or competitive position can affect stock performance. Companies with high levels of debt or poor financial health may face difficulties that can impact their stock value. Unexpected events such as management changes, regulatory fines, or product recalls can impact stock prices.
- **Liquidity Risk:** Stocks with low trading volumes can be harder to buy or sell without affecting the stock price significantly. In times of market stress, liquidity can dry up, making it harder to execute trades at desired prices.
- **Political and Regulatory Risk:** Changes in government policies, regulations, or taxation can impact corporate profits and stock values. Political instability, conflicts, or trade disputes can affect global markets and individual stocks.
- **Currency Risk:** Fluctuations in exchange rates can affect the value of investments in foreign equities or equity-related instruments.
- **Behavioural Risk:** Market prices can be influenced by investor behavior, including irrational exuberance or panic selling, which can lead to significant price swings.
- **Sector-Specific Risk:** Specific sectors may face unique risks, such as technological changes in tech or regulatory issues in healthcare, which can impact stocks within those sectors.

## 2. Risk factors associated with investing in Money Market Instruments:

Edelweiss Nifty Bank ETF will invest not less than 95% of its corpus in the securities representing the Nifty Bank Index as this Scheme endeavors to earn returns that correspond to the total returns represented by the Nifty Bank Index. The Scheme will have insignificant cash or debt/money market investments. Therefore, the scheme is not significantly susceptible to risks associated with debt/money markets. Risks associated with debt /money market instruments are as under:

- **Interest rate Risk:** Price of a fixed income instrument generally falls when the interest rates move up and vice-versa. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.
- **Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- **Credit risk or default Risk:** Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest and/or principal payment obligations. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government Securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.
- **Liquidity & Settlement Risk:** The liquidity of a fixed income security may change, depending on market conditions leading to changes in the liquidity premium attached to the price of such securities. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio. Different segments of the financial markets have different settlement cycle/periods and such settlement cycle/periods may be impacted by unforeseen circumstances, leading to Settlement Risk. This can adversely affect the ability of the Fund to swiftly execute trading strategies which can lead to adverse movements in NAV.
- **Reinvestment Risk:** Interest rates may vary from time to time. The rate at which intermediate cash flows are reinvested may differ from the original interest rates on the security, which can affect the total earnings from the security.
- **Prepayment Risk:** The Scheme may receive payment of monthly cashflows earlier than scheduled, which may result in reinvestment risk.
- **Market Risk:** Lower rated or unrated securities are more likely to react to developments affecting the market as they tend to be more sensitive to changes in economic conditions than higher rated securities

## 3. Risk Factors associated with the Scheme:

### a. Passive Investments:

As the scheme proposes to invest not less than 95% of the net assets in the securities of the benchmark Index, the Scheme will not be actively managed. The Scheme may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets.

**b. Tracking Error and Tracking Difference Risk:**

Tracking Error and Tracking difference is to measure divergence of the performance (return) of the Fund's portfolio from that of the Underlying Index. Tracking error / Tracking difference are inherent in any index fund and such errors may cause the schemes to generate returns which are not in line with the performance of the Nifty Bank Index or one or more securities covered by / included in the Nifty Bank Index. That said, the risk parameters of the portfolio of the Scheme and underlying index would be similar. Tracking Error / Tracking Difference may arise from a variety of factors including but not limited to:

1. Any delay in the purchase or sale of shares due to illiquidity in the market, settlement and realisation of sales proceeds, delay in credit of securities or in receipt and consequent reinvestment of dividends, etc.
2. The index reflects the prices of securities at a point in time, which is the price at close of business day on National Stock Exchange of India Limited (NSE). The scheme, however, may trade the securities at different points in time during the trading session and therefore the prices at which the scheme trades may not be identical to the closing price of each scrip on that day on the NSE. In addition, the scheme may opt to trade the same securities on different exchanges due to price or liquidity factors, which may also result in traded prices being at variance from NSE closing prices.
3. The potential of trades to fail may result in the scheme not having acquired the security at the price necessary to mirror the index.
4. Transaction and other expenses, such as but not limited to brokerage, custody, trustee and investment management fees.
5. Being an open-ended scheme, the scheme may hold appropriate levels of cash or cash equivalents to meet on going redemptions.
6. The scheme may not be able to acquire or sell the desired number of securities due to conditions prevailing in the securities market, such as, but not restricted to circuit filters in the securities, liquidity and volatility in security prices.
7. Due to the reasons mentioned above and other reasons that may arise, it is expected that the scheme may have a tracking error not to exceed by of 2% per annum from its Benchmarks.
8. However, it needs to be clearly understood that this is just an indicative range and that the actual tracking error can be higher or lower than the range given.

**c. Operational risks:**

1. There are risks associated with the day-to-day management of the fund, including errors in trading or valuation like safekeeping of ETF assets, cash reporting and deployment etc
2. Due to technical error, the reporting of NAV at frequent intervals on the website and exchange may be impacted.
3. Risk associated with the index provider's accuracy in maintaining and calculating the index. Errors or changes in the index methodology can impact ETF performance. Failure to update the same while rebalancing may also impact the performance and tracking error
4. Frequently rebalancing of the ETF's holdings to match the index, which can lead to transaction costs and potential market impact.

**4. Risk factors associated with Derivatives:**

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

The Fund may use derivatives instruments like equity futures & options, or other derivative instruments as permitted under the Regulations and Guidelines. The scheme will be using non-hedging strategy.

Common risk associated with Trading in derivatives:

- a. Exposure risk: An exposure to derivatives can lead to losses. Derivatives carry the risk of adverse changes in the market price.
- b. Illiquidity Risk i.e. risk that a derivative trade may not be executed or reversed quickly enough at a fair price, due to lack of liquidity in the market.
- c. Execution Risk - The prices which are seen on the screen need not be the same at which execution will take place.
- d. Mark to Market Risk - There could be a market to market loss that would arise and additional margin may need to be provided for the same.
- e. Basis Risk - In extraordinary circumstances, the Fund Manager may have to unwind positions before the expiry at a basis which may be higher than the initiation basis to meet redemptions. Premature unwinding of the position might result in the locked-in profits not getting realized.
- f. Tracking Error Risk - Corporate actions such as demergers might result in the weights of the index stocks to change. This might lead to a tracking error affecting the returns to a certain extent.

#### **5. Risks Associated with exposure in Tri-party Repo**

Risk of exposure in the Tri-party Repo settlement Segment provided by CCIL emanates mainly on two counts –

- a. Risk of failure by a lender to meet its obligations to make funds available or by a borrower to accept funds by providing adequate security at the settlement of the original trade of lending and borrowing under Triparty Repo transaction.
- b. Risk of default by a borrower in repayment.

#### **6. Risks Associated with segregated portfolio**

- 1) Unit holder holding units of Segregated Portfolio may not able to liquidate their holdings till the recovery of money from the issuer.
- 2) Portfolio comprising of Segregated Portfolio may not realise any value or may have to be written down.
- 3) Listing of units of Segregated Portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

#### **7. Risks associated with Securities Lending:**

It may be noted that this activity would have the inherent probability of collateral value drastically falling in times of strong downward market trends, rendering the value of collateral inadequate until such time as that diminution in value is replenished by additional security. It is also possible that the borrowing party and/or the approved intermediary may suddenly suffer severe business setback and become unable to honor its commitments. This, along with a simultaneous fall in value of collateral would render potential loss to the Scheme. Besides, there is also be temporary illiquidity of the securities that are lent out and the scheme will not be able to sell such lent out securities until they are returned.

As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the

approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

### C. RISK MANAGEMENT STRATEGIES

The Fund has designed a detailed process to identify, measure, monitor and manage the portfolio risk. The aim is not to eliminate the risk completely but to have a structured mechanism towards risk management thereby maximizing potential opportunities and minimize the adverse effects of risk. Few of the key risks identified are:

#### Risk associated with Equity and equity related instruments:

Risk & Description specific to the Scheme	Risk mitigants / Management Strategy
<p><b>Market Risk</b> The value of the Scheme's investments, may be affected generally by factors affecting securities markets, such as price and volume, volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets.</p>	<p>Market risk is a risk which is inherent to an equity scheme. Understand the working of the markets and respond effectively to market movements. The scheme may use derivatives to limit this risk.</p>
<p><b>Concentration risk</b> Risk arising due to over exposure in few securities</p>	<p>Equity exposure to replicate Index</p>
<p><b>Liquidity risk</b> The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests.</p>	<p>Control portfolio liquidity at portfolio construction stage. Having optimum mix of cash &amp; cash equivalents along with the money market instruments in the portfolio as defined in asset allocations. The fund will try to maintain a proper asset-liability match to ensure redemption payments are made on time and not affected by illiquidity of the underlying stocks.</p>
<p><b>Derivatives Risk</b> Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.</p>	<p>The fund has provision for using derivative instruments for portfolio balancing and hedging purposes. Investments in derivative instruments will be used as per local (RBI and SEBI) regulatory guidelines. The fund will endeavor to maintain adequate controls to monitor the derivatives transactions entered into.</p>

**Risk associated with Debt and money market instruments:**

<b>Risk &amp; Description specific to the Scheme</b>	<b>Risk mitigants / Management Strategy</b>
<p><b>Market Risk</b> Changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.</p>	<p>Fund Managers will periodically monitor the portfolio structure with respect to the existing interest rate scenario. Exposure to Debt and Money market instruments will be in the form of TREPs and other liquid assets to the extent permissible.</p>
<p><b>Concentration risk</b> Risk arising due to over exposure in few securities</p>	<p>Exposure to Debt and Money market instruments will be in the form of TREPs and other liquid assets.</p>
<p><b>Liquidity risk</b> The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.</p>	<p>The fund will endeavor to minimise liquidity risk by investing in securities having a liquid market. Exposure to Debt and Money market instruments will be in the form of TREPs and other liquid assets.</p>
<p><b>Credit Risk</b> The value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default.</p>	<p>Detailed evaluation of issuers will be done. Investments will be done on high credit quality securities. Exposure to Debt and Money market instruments will be in the form of TREPs and other liquid assets.</p>
<p><b>Reinvestment Risk</b> The rate at which interim cash flows can be reinvested may be lower than that originally assumed.</p>	<p>Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be a very small portion of the portfolio value. Exposure to Debt and Money market instruments will be in the form of TREPs and other liquid assets.</p>

**Settlement of Purchase/Sale of Units of the Scheme on Stock Exchange:**

Buying/Selling of Units of the Scheme on Stock Exchange is just like buying/selling any other normal listed security. If an investor has bought Units, an investor has to pay the purchase amount to the broker/sub-broker such that the amount paid is realised before the funds pay-in day of the settlement cycle on the Stock Exchange(s). If an investor has sold Units, an investor has to deliver the Units to the broker/sub-broker before the securities paying day of the settlement cycle on the Stock Exchange(s). The Units (in the case of Units bought) and the funds (in the case of Units sold) are paid out to the broker on the pay-out day of the settlement cycle on the Stock Exchange(s). The Stock Exchange(s) regulations stipulate that the trading member should pay the money or Units to the investor within 24 hours of the pay-out.

If an investor has bought Units, he should give standing instructions for “Delivery-In” to his /her/its DP for accepting Units in his/her/its beneficiary account. An investor should give the details of his/her beneficiary account and the DP-ID of his/her/its DP to his/ her/its trading member. The trading member will transfer the Units directly to his/her/ its beneficiary account on receipt of the same from NSE’s Clearing Corporation. An investor who has sold Units should instruct his/her/its Depository Participant (DP) to give “Delivery Out” instructions to transfer the Units from his/her/its beneficiary account to the Pool Account of his/her/its trading member through whom he/she/it have sold the Units. The details of the Pool A/C (CM-BP-ID) of his/her trading member to which the Units are to be transferred, Unit quantity etc. should be mentioned in the Delivery Out instructions given by him/her to the DP. The instructions should be given well before the prescribed securities pay-in day. SEBI has advised that the Delivery Out instructions should be given at least 24 hours prior to the cut-off time for the prescribed securities pay-in to avoid any rejection of instructions due to data entry errors, network problems, etc.
